LIST OF COLLATERAL USES OF THE U-2

A. PREVIOUSLY ACCOMPLISHED:

1. RED DOT: Color film test in U-2C and U-2R.
2. SNOW SURVEY: Photography in support of Department of Commerce water resources survey in California.
3. OIL SLICK PHOTOGRAPHY: Special request for color photography of the recent oil slick off the California coast.
4. COLOR TASK FORCE SUPPORT: Sorties for special testing of satellite color film. Special targets are designated.
5. REAL TIME RELAY: Testing of real time display module  
25X1A2g U.S. Navy.

6. [REDACTED]

7. [REDACTED]

8. VARIOUS TESTS SUCH AS:

a. [REDACTED]

b. [REDACTED]

c. Drag Reduction.

d. Improved Navigation.

e. [REDACTED]

f. Shakedown Tests on Equipment.

g. Operational Testing.

9. [REDACTED]

10. Support of Clear Air Turbulence Studies.

B. POTENTIAL:

1. Mapping for USGS.
2. Water surveys for resources management.
3. Leaflet drops.
4. Support of tactical operations such as the F-111 targeting requirement. USAF does not presently plan to acquire an RF-111 aircraft. Consequently, there is no tactical reconnaissance aircraft with sufficient range (without in-flight refueling) to accomplish targeting, pre-strike and post-strike reconnaissance for the F-111 force. This need could possibly be met by U-2 aircraft where the operational environment will allow.
5. Support of studies of atmospheric and water pollution. Air sampling contributes to the atmosphere studies; infrared imagery could reveal thermal differences in water.
6. Submarine detection and tracking through thermal detection means.
